Micro High End Components

Product Announcement, 10/11/2011: **Pro-Ject Dock Box S Digital**

Henley Designs are delighted to announce the latest addition to the Box Design series of micro-Hi-Fi electronics from Pro-Ject Audio Systems. The extremely popular Dock Box model has now been rejuvenated to include a digital-out option – allowing users to partner a high quality digital signal transfer from their iPod®, iPad® or iPhone® with their DAC of choice.

Pro-Ject have developed the Box Design range in order to open the world of high-quality hi-fi to those looking for an affordable option, or with limited space in their listening room. The new “S Class” Box Design models have a thicker front panel with no screws, adding an elegant and luxurious look to the innovative range. Elsewhere, the chassis construction is still a heavy, vibration-free and magnetically isolated aluminium housing, allowing the internal components to perform to their fullest potential. The brand new Dock Box S Digital is capable of taking your mobile digital music library from any legitimate Apple device and connecting it to an existing hi-fi system – all in a simple and logical way.

By plugging in an iPod® or any other 30-pin connection device, the Dock Box S Digital immediately springs into life, recognising the device by charging the battery. The contained library can then be navigated either by using the user interface, or more conveniently from a distance with the included IR remote control. Once a track is selected to play back, the audio signal is taken digitally from the attached device, avoiding the sound degradation associated with headphone outputs, and sent to the 24-bit/192kHz Cirrus Logic DAC contained within the effortlessly small chassis before being exported via the RCA outputs.

Alternatively if you already have a preferred Digital-to-Analogue Converter, an additional strength of the new Dock Box S Digital is the inclusion of a gold-plated S/PDIF Coaxial output. This further adds to the audiophile credentials of this stylish product.

Quality is a defining feature of the Dock Box S Digital and all Pro-Ject Box Design models. Due to the implementation of XMOS audio processors, ultra-low jitter levels are guaranteed when playing through the Dock Box. The inclusion of a USB port on the rear also allows users to connect the Dock Box S Digital to their computer, where the installed iTunes software will recognise your docked device – allowing users to update their iPod®, iPhone® or iPad® libraries without having to disconnect and use their Apple cable.

The Dock Box S Digital is a small, convenient and stylish digital audio source that should be considered by any discerning listener who wants to get the most out of their portable Apple device.

The Dock Box S Digital will be available in Black and Silver finishes from November 2011. **SRP £200.**

Technical Specifications

Input:	30-Pin Connector
Output:	Analogue(RCA) & S/PDIF (RCA-Digital)
Audio Processor:	XMOS (400 Mhz)
D/A Convertor:	Cirrus Logic (24-bit/192kHz)
Dynamic Range:	105dB
Computer Port:	USB
Finish:	Black or Silver Faceplate
Power Supply:	External, 9V/2A DC
Dimensions:	103 x 36 x 109mm (W x H x D)
Weight:	585g (without power supply)
