Product Announcement: Pro-Ject Media Box S

Henley Designs are delighted to announce the latest addition to the Box Design series of micro-Hi-Fi electronics from Pro-Ject Audio Systems. The fully-digital Media Box S is aimed at customers who want to listen to their digital music in high-quality without the need for a computer or NAS drive.

Pro-Ject have developed the Box Design range in order to open the world of high-quality hi-fi to those on a small budget or with limited space in their listening room. The new "S Class" Box Design models have a thicker front panel with no screws, adding an elegant and luxurious look to the innovative range. The brand new Media Box S is capable of opening up an entire digital music library, contained on either a USB drive or SD card, to an existing hi-fi system – all within an impressively small unit.

By inserting either a USB drive or SD card into the Media Box S users can listen to any MP3, WMA, AAC or VBR files (up to 384 kbps compression) in Hi-Fi quality, thanks to the premium 24bit/96kHz up-sampling chip Pro-Ject have employed. Expansive libraries can be navigated with convenient simplicity via either the small but perfectly formed remote or simple and intuitive three-button navigation on the front panel. Navigation is made even easier thanks to the extremely high-quality screen, offering album artwork, artist, title or track information. Or for ease and convenience, a shuffle play command means you can sit back and enjoy a more random musical journey.

Quality is a defining feature of the Media Box S and all Pro-Ject Box Design models. USB hard drives are communicated with over the superfast USB 2.0 protocol in synchronous clock mode, and are powered by the Media Box S, eliminating the need for additional wall-powered devices. The overall construction is a heavy, vibration-free and magnetically isolated aluminium housing, allowing the internal components to perform to their fullest potential. Finally, the Media Box S is connected to an external Hi-Fi system via either gold-plated RCA connectors, or for connection to a preferred DAC via a gold-plated SPDIF digital coaxial output.

The Media Box S is a small, convenient and stylish digital audio source that should be considered by any discerning listener who's tied to a limited budget or small space.

The Media Box S will be available in Black and Silver finishes from July 2011. **SRP will be £249.**
